

TWIN RAIL ASSEMBLY LINE WORKSTATION

BUILD TO ANY LENGTH. ALUMINUM RAIL MAKES IT VERSATILE

There could be an infinite number of variations on this theme so use your imagination. Be sure to stay within the following size and capacity parameters: Maximum 10' wide and 8' (6' is ideal) between uprights, 50 lbs. maximum per trolley and no more than one trolley per upright. Design the structure to be as long as needed. Aluminum rail is available in 20' lengths, but make sure splice angles don't interfere with hanger disks.
