

TRAVELING BOOM...

ADD REACH, FLEXIBILITY TO WORKSTATION

The **PROBLEM:** Move a 30 lb. tool to any spot on a 40 ft. assembly line, including in or out 8+ ft.

The **SOLUTION:** Two aluminum rails hung beneath fixed jibs mounted on 11 ft. columns. WS50-10HR rolling hangers with side guide rollers inserted into the rails. Then, two 9 ft. aluminum rails hung from the trolleys and a third WS50-10HR trolley with CVS-11 swivel clevis in one of those rails.

DOES IT WORK? You bet it does.
